Self-starting and enthusiastic data scientist with 8+ years of experience working with scientific data in a variety of coding languages, designing **reproducible quality control, analysis, and visualization workflows**, and sharing results in a range of written and oral formats. Effective at carrying out individual work while also excelling in collaborative team settings and **big-picture project management**. A bright, adaptable worker who can successfully lead or assist on dynamic projects.

Expert

Advanced

Skills

Intermediate

Basic

R • Git • GitHub • Teaching
Synthesis • QA/QC • Quarto
Project Management
Data Visualization • GLMs
Package Development

Website Development
Multivariate Statistics
Spatial Data • Shiny
Technical Communication
Documentation

Python • HTML • Text Mining
Inclusive Facilitation
API Use • **Affinity Studio**
Team Management

SQL (pgAdmin) • SCSS
CSS • **Metadata (EML)**
Machine Learning (MaxEnt)
Survey Design • Bash

Data Scientist | National Center for Ecological Analysis & Synthesis | Feb. 2022 – Present

- Collaborated with 180+ researchers in 17 working groups to support technical needs
- Designed and iteratively improved hundreds of reproducible scripted workflows
- Extensively adopted-and-trained others in-version control with Git and GitHub
- Created a website as the hub for trainings on best practices for synthesis teams (lter.github.io/scicomp)
- Managed separate projects from start to finish simultaneously with agile project management principles

Technical Lead | Long Term Ecological Research Network Office | Jun. 2024 – Present

- Recruited design team members, co-instructors, panelists, and guest instructors
- Implemented project management schema for all facets of course design
- Created an open-source website to host all course materials for free (lter.github.io/sseccr)
- Lead the creation and teaching of over half of the modules personally and collaborated on remaining modules
- Facilitated biweekly class sessions for the 25+ students in the inaugural cohort

Co-Principal Investigator | "AI in a Day" Working Group | Apr. 2026 – Present

- Wrote a successful grant proposal to the Environmental Data Science Innovation & Impact Lab
- Designed materials for teaching fundamental AI skills to environmental scientists, educators, and students
- Served as the "collab lead" responsible for the facilitation and team dynamics facets of the work
- Designed a survey for assessing environmental scientists' perspectives on generative AI

Visiting Data Scientist | La Kretz Research Center | Sep. 2025 – Aug. 2026

- Trained colleagues in using GitHub to collaboratively develop and maintain reproducible code
- Created a GitHub Organization for the Center (github.com/sedgwick-lkc)
- Overhauled WordPress website to improve navigability and external user experience
- Wrote custom R functions for quality assurance and initial data processing from a variety of input formats

Adjunct Professor | Stonehill College | May – July 2023 & 2024

- Designed an eight-week course introducing fundamental data science skills to life sciences undergraduates
- Helped students create professional portfolios of their strongest in-class work, hosted on GitHub
- Offered holistic feedback on student work and encouraged iterative revision processes
- Created website to openly share all course materials (njlyon0.github.io/teach_r-for-biologists)

Data Scientist | Herbivory Variability Network | Aug. 2021 – Feb. 2022

- Designed a QC workflow for standard data collected by 200+ collaborators from more than 30 countries
- Wrote a data management plan to standardize post-QC data handling and distribution
- Revised onboarding protocols for new collaborators on field methodologies and data entry processes
- Created an interactive app for preliminary data QA/QC and standardized data submission

R / Python Bilingualism Website Creator | Self | Jul. 2023 – Apr. 2024

- Self-taught Python through the lens of ‘translating’ R operations into comparable Python code
- Designed a website to store created bilingualism materials (njlyon0.github.io/collab_bilingualism)
- Designed a range of increasingly complex operations and grouped those pages thematically
- Wrote extensive contributing guidelines for crediting collaborators
